T	he low rate of incoming amminitie	on is noteworthy, s	specially as during	19 51. a

The low rate of incoming ammunition is noteworthy, especially as during 1951, a maximum volume of incoming shipments had arrived. Prior to 26 November, 113 cars with ammunition had arrived from the U.S.S.R. These shipments cannot be interpreted yet. It is possible that the degree of stock-piling of ammunition planned by the Soviets for East Germany in 1952 has been achieved and therefore it was only necessary to replace the ammunition actually used. It is believed.

In this case, 70 to 100 carloads of ammunition would be sufficient. Indications that East Germany has started to manufacture ammunition have not been observed to date.
